

Occupation	Brief Description	Major Responsibilities/tasks	Specific areas in nutrition field	Educational Qualifications Needed
Clinical Dietitian	Dietitians provide nutritional services for patients, promote sound eating habits through education, and conduct research.	Clinical dietitians work one-on-one with patients to assess their needs and develop nutritional plans along with doctors and other health care professionals.	Clinical	Bachelor's degree, Dietetic Internship, national exam
Pharmacist	Pharmacists distribute drugs prescribed by physicians and other health practitioners and provide information to patients about medications and their use.	They counsel patients and answer questions about prescription drugs, including questions regarding possible side effects or interactions among various drugs. They provide information about over-the-counter drugs and make recommendations after talking with the patient. They may also complete third-party insurance forms and other paperwork.	Clinical	Doctorate; state-issued license required
Certified Nursing Assistant	A certified nurse assistant (CNA) performs direct care and routine tasks under the supervision of nursing and medical staff.	They answer patients' call lights, deliver messages, serve meals, make beds, and help patients to eat, dress and bathe. A CNA also may take patients' temperature, pulse rate, respiration rate and blood pressure, and help them to get into and out of bed and walk	Clinical	150 hours training; state-issued license required

Physician Assistant	Physician assistants provide health care services typically performed by a physician, under the supervision of a physician.	They take medical histories, examine and treat patients, order and interpret laboratory tests and X-rays, make diagnoses and prescribe medications. They also treat minor injuries and may supervise technicians and assistants.	Clinical	Master's degree; state-issued license required
Nurse Practitioner	Nurse practitioners are advanced practice nurses who provide health care services similar to physicians.	They order, perform and interpret diagnostic tests, and diagnose and treat acute and chronic conditions such as diabetes, high blood pressure, infections and injuries. They may also prescribe medications and other treatments, manage patients' overall care and counsel patients	Clinical	Master's degree; state-issued license required
Registered Nurse	Registered nurses treat and educate patients, and they provide advice and support to patients and their family members.	They record patients' medical histories and symptoms, help to perform diagnostic tests and analyze results, administer treatment and medications, operate medical equipment and help with patient follow-up and rehabilitation. They also teach patients and their families how to manage their illnesses or injuries, including post-treatment home care needs	Clinical	Associate's degree; state-issued license required

Respiratory Therapist	Respiratory therapists evaluate, treat and care for patients with breathing or other cardiopulmonary disorders.	To evaluate patients, respiratory therapists conduct interviews, perform limited physical examinations and conduct diagnostic tests. They treat patients using oxygen or oxygen mixtures, chest physiotherapy and aerosol medications. Respiratory therapists provide complex therapy requiring considerable independent judgment, such as caring for patients on life support in intensive-care units of hospitals.	Clinical	Associate's degree; state-issued license required
Speech Therapist/Pathologist	Speech language pathologists and speech therapists diagnose, treat and prevent speech, voice, swallowing and other related disorders.	They use written and oral tests, as well as special instruments, to diagnose the nature and extent of impairment and to record and analyze speech, language and swallowing irregularities. They help patients develop or recover reliable communication skills so patients can fulfill their educational, work and social roles.	Clinical	Master's degree; state-issued license required

Social Worker	Licensed clinical social workers help people function in their environment, deal with relationships, and solve personal and family problems.	Social workers often see clients who face a life-threatening disease or a social problem, such as inadequate housing, unemployment, a serious illness, a disability, or substance abuse. Social workers also assist families that have serious domestic conflicts, sometimes involving child or spousal abuse.	Clinical	Master's degree; state-issued license required
Dietary Technician Registered	Dietetic technicians can promote healthy eating through counseling sessions, during which they may instruct patients, clients and their families how to choose and prepare healthy food. Often under the guidance of registered dietitians	plan and prepare patient meals, order food and supplies, provide direction nutritional therapy and document patient intake. They also educate healthcare providers, community groups or students about nutrition through programs and training sessions. They may develop, implement or recommend nutrition programs for individuals and groups based on evaluations of dietary needs	Clinical	Students may also choose to enroll in a bachelor's degree program, engage in CADE-approved supervised practice and pass the CDR exam, the ADA said. Successful completion of either path will award the student Dietetic Technician, Registered (DTR) status.
